Quality Policy

Quality is the integrate part of our commitment to providing excellent products and services, that match or exceed customers' expectation continually striving to review and improving our objectives and achievements for efficient performance.

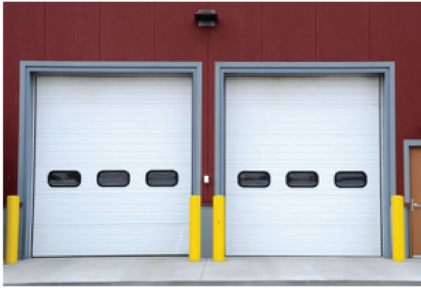

Supply & Installation of

- Industrial Doors
 - Residencial Doors
 - Docking System
 - Gate Barrier
 - Gate Operators &
 - Loadingbay Automation
- also we will provide repair, service & annual maintainance contract for all products.

Fabrication & Supply of

- Vehicle Parking Guide
- Wheel Chock, Rubber Fender
- Safety Man Cage
- Protection Guard
- Warehouse Equipment

Sectional Door

Sectional door is available to satisfy applications where durability, reliability and economy are top priorities. An array of door panel profiles, track and hardware, and specialized options allows you to further customize these doors to your specific project requirements.

Top-quality materials, excellent field service and optional maintenance program contribute to extended door life, low maintenance costs and maximum productivity

Sectional Door with Pass Door

If your garage is too narrow for a side door, but you don't want to have to do without that convenience, then we recommend an integrated pass door. Pass doors are available for all exclusive garage doors up to a width of 5 m. They offer a practical passage width of 85 cm and are fitted with double skin insulation to ensure perfect thermal performance

High Speed Doors

High-performance doors, in general, allow quick movement throughout your facility. They also have specific functions used in industries like food processing, logistics, and high-tech. Among these functions are weather resistance, security, environmental containment, and pressure stability.

Spiral Door

The Spiral commercial overhead door offers high-speed operation for high-traffic situations and rigid aluminum slat construction that eliminates the need for a second security door. Crisp lines give the Spiral door a stylish look that's great for many types of commercial, automotive retail, government, institutional and industrial applications. When considering an overhead coiling door the Spiral door is known as the most secure option for automotive dealerships, government, parking and security needs.

Industrial Folding Doors

Industrial folding door is often used when the top of the door and the space on both sides are insufficient. It is applied to small workshops, warehouses, garages, ships, industrial enterprises, ports, and large-scale scientific research bases.

Rolling Shutter

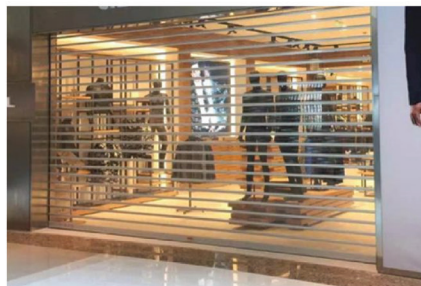

Rolling shutter door is commonly used for garages, godowns, shops front show windows, etc. as they are quite strong and offer proper safety to the property. The door shutter acts as a curtain and therefore provides adequate protection and safety against fire and thefts. This door is sufficiently strong and offer proper safety to glass and interiors when closed.

Polycarbonate Door

Polycarbonate Door could widely use for commercial shop & shopping center.

Features:

- * Almost transparent-Display can be seen when shop is closed
- * High security - near steel strength
- * Virtually indestructible - Fabricated from extruded aluminum, robust weather and rust proof
- with polycarbonate glazing making the shutter almost indestructible.
- * Ideal for shopping malls and high profile shops

Flip Flap Door

Doors Axis is special eccentric design. The door body leans along the axis generating a force reverse with opening direction. Thus the door closes automatically. Door leafs can open to both inside and outside directions. Thus the person or vehicle can pass through easily.

Residential Doors

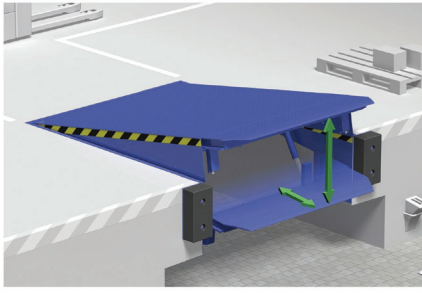

We offer a large selection of residential garage door designs in many colors and options that can drastically enhance your home's curb appeal.

Insulated Freezer Rapid Roller Door

Insulated Freezer Rapid Roller door is designed for cold storage area freezing room, isolated warehouse, thermal regulated area ,especially pharmacy, food, and chemistry industries.

It can work in -25 C extreme low temperature area.

Dock Leveler

Dock leveler also known as Dock Ramp or Loading Ramp, widely used in loading bays of logistics centers, warehouses and dispatch area of factories. In most cases, the container floor of truck will not be on the same level with loading bay floor. And this lead to that, forklifts or trolley can not be used to load or unload goods into container. It will take much labor to move the goods by hand. This will be very low efficient.

But with a automatic dock leveler, such problem with be solved perfectly. The stationary fixed dock leveler will be placed into a pre-built concrete pit on the loading bay. A hydraulic motor drives the platform up and down, realizing seamless joint between room ground and truck floor. Then, forklifts or trolleys can transfer goods quickly on the dock leveler platform. Thus it improves the loading & unloading efficiency obviously and also save much labor.

A pre-built concrete pit on the loading bay. A hydraulic motor drives the platform up and down, realizing seamless joint between room ground and truck floor. Then, forklifts or trolleys can transfer goods quickly on the dock leveler platform. Thus it improves the loading & unloading efficiency obviously and also save much labor.

Edge Dock Leveler

Edge Dock Levelers are used where the ramp is not available to be embedded into the concrete or to ensure easy installation for the enterprises whose the construction process had finished.

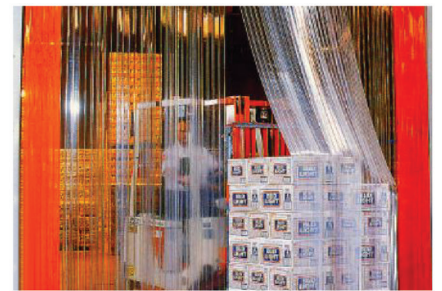

Dock Shelter

Dock Shelter & Seal Used for seal between dock and truck containers. It can protect goods and avoid exterior air and dust entering the room during the loading and unloading process.

PVC Curtain

Strip doors also known as strip curtains or PVC Strip Curtains. They are clear, flexible doors and barriers to the exchange of Air and Dust between two different areas. They safeguard a place and even maintain the visibility. They are various variants available based on the application like Normal, Freezer, Insect Control, Welding, anti static and many more

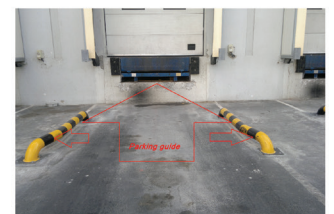

Loading Bay Automation

It gives signal to the truck driver while parking and indicates the stopping position.

Parking Guide

Parking guides are installed to aid the driver to correctly position the trailer on the loading bay. it is positioned at the front of the loading bay to increase safety and efficiency during the cycle of loading & unloading.

Wheel Chock

Wheel chocks are wedges of sturdy material placed closely against a vehicle's wheels to prevent accidental movement.

There are two types of wheel chock:

1. Wheel Chock with trolley system
2. The other is the standard type

Dock Fender

A dock fender protects your building and vehicles from getting damaged.

Gate Barrier

It can be used for parking systems.

Man Cage

A man cage is used to carry personnel, transporting them to and from a high-level work situation. Man cages also help workers to carry their tools and materials to high work locations.

Warehouse Equipment

Picker Trolley

Drum Grabber
